

Catastrophe Modeling Analyst

Elementum Advisors, LLC is seeking candidates for the position of Catastrophe Modeling Analyst. The ideal candidate will have strong quantitative skills and proficiency using Microsoft Excel and SQL databases. This is an entry-level position, and candidates are expected to have zero to three years of work experience. Graduates in finance, economics, math, statistics, actuarial sciences, and related disciplines will be considered; computer programming skills are a plus if relevant to financial engineering.

The analyst will perform work related to financial engineering and risk management, using catastrophe modeling software to quantify the risk from earthquakes, hurricanes, and other natural catastrophe events to our investment portfolios. Responsibilities will include:

- performing calculations of portfolio risk measures;
- modeling of individual investment opportunities, which may be used by the portfolio managers in connection with their buy/sell decisions.

This is a full-time, permanent position with competitive pay and benefits. The analyst will be based in our downtown Chicago office and should expect little to no travel.

About Elementum Advisors, LLC
